Reflection Questions

Which measure do you think best represents the center of the data: the mean, median, or mode? Justify your choice based on the data.

answer here

Observe the histogram and describe the overall shape of the data distribution. Would you describe the histogram as symmetric or skewed? What does this tell you about the exam scores?

answer here

If a few very high or very low exam scores were added to the data set, how would you expect the mean and median to change? Which measure is more sensitive to these changes and why?

answer here

What customization did you make to the Histogram figure, and why did you choose it?

answer here

How did removing these low scores affect each of these measures? What does this tell you about the sensitivity of these statistics to changes in the data set, and which measure(s) are more robust to such changes?

answer here

unifrom data set	normal data set						unifrom data set	normal data set
47.00	37.00						42.00	38.00
53.00	53.00					44	63.00	53.00
39.00	67.00		**min**	**min**			60.00	43.00
